Bedroomchecker Token (BCT) Whitepaper

Introduction

Bedroomchecker Token (BCT) is a utility token on the Polygon blockchain designed to provide users with the ability to place and maintain backlinks on the Bedroomchecker.com website. When a user holds 200 BCT tokens, their backlink placement on the Bedroomchecker site will remain active for as long as the tokens are held. This creates an innovative crypto-powered marketing tool that supports long-term SEO strategies.

Token Use Case

Users can place backlinks on Bedroomchecker.com by holding a minimum of 200 BCT tokens. The backlink will remain active on the site for as long as the tokens are held, ensuring continuous exposure and marketing benefits for token holders.

Key Benefits

- Token-controlled backlink access: Users manage backlink placement through token ownership.

- Sustained marketing presence: Backlinks stay live while tokens are held, enabling long-term promotion.

- Secure and transparent: Powered by Polygon blockchain for trust and immutability.

Token Details

- Token Name: Bedroomchecker Token

- Symbol: BCT

- Blockchain Network: Polygon

- Minimum Holding for Backlink Placement: 200 BCT

Future Development Plans

- Expansion of backlink opportunities across partner websites.

- Development of a user dashboard for backlink and token management.

- Introduction of additional marketing features powered by BCT.
